

# SEATING OPTIONS

## TECNO SINGLE

The Tecno Single Seat is easily fixed to the deck via an aluminium base and it is bolted laterally through a single point. Its round and ergonomic shape allows easy cleaning combined with minimum maintenance and both the structure and vinyl covering are available in different colours. All mechanical elements of the seats are made from aluminium. The up and down seat adjustments are operated through an electrical switch and this allows the seat to be configured for a standing, seated or any intermediate position. Additional comfort is guaranteed by an integrated suspension system.

Dimensions: H1120x480x580 mm

## TECNO G10

Tecno G10 is the top seat of FB DESIGN range. Designed for accelerations up to 10 Gs, it has been developed for safe and comfortable driving in rough waters. These modular seats are controlled by an electric actuator, which allows easy variable support by the simple push of a button. The driver and the crew can choose between a seated, a standing or any intermediate position, choosing the best weight distribution between legs and bottom, but always well protected by a four points safety belts system. Extreme comfort is given by a suspension based on two deformable parallelograms with shock absorbers and springs adjustable to the three different positions. Safety belts are strongly recommended only in combination with a canopy and offer the possibility of sleeping during navigation.

Dimensions H1560x575x620 mm

## TECNO DOUBLE

The Tecno Twin Seat derives from the Tecno Single Seat concept. This version is self-supporting, is bolted directly to the cockpit floor and does not require additional lateral fixing.

Dimensions H1120x450x1180 mm

## TECNO MOTO

The Tecno Moto is a new seat concept designed for special forces and suitable for the transport of many people in limited space. Tecno Moto is a modular seat built around a pipe, which creates the structure, and special columns carrying each seat and the front seat spring and shock absorber. Below each seat there is a fixing place for a Pelican waterproof box. Tecno Moto seats are generally installed in two or three rows staggered side by side to avoid possible shoulder contact.

Dimensions H907x640x250 mm (one seat)
